US Treasury Futures and Options

Directly listed exchange venue and core contract reference | Information checked 2026-09-28

Executive summary

The directly verified exchange venue for standardized US Treasury futures and options is the Chicago Board of Trade (CBOT), a designated contract market within CME Group. The products trade electronically on CME Globex and clear through CME Clearing. CME also offers bilateral block, EFR and EFP execution channels, but those are execution methods around the listed contracts rather than separate exchanges.

A check of the ICE product page located an ICE Brent crude contract, not a directly listed US Treasury futures or options product. This report therefore does not count ICE, Eurex, Nasdaq, or other venues that may provide access, data, clearing, or related rates products unless a direct US Treasury contract listing was verified.

Exchange scope

Venue	Role	Verified scope
CBOT / CME Group	Listed futures and options exchange	US Treasury note and bond futures; options on those futures; CME Globex, blocks, EFRs and EFPs
CME Clearing	Central counterparty / clearing service	Clears the listed CME Group interest-rate products; it is not a separate listing venue
ICE / Eurex / Nasdaq	Not included as direct venues	No directly listed US Treasury futures/options contract was verified for this report

Core Treasury futures

All six contracts below are deliverable futures. The deliverable security is selected from a published basket of eligible US Treasury securities; the cheapest-to-deliver security and conversion factor can change by contract month. Prices are quoted in points and fractions of 1/32 of par. Tick values below are the standard outright minimum price fluctuation values.

Contract	CME symbol	Contract unit	Minimum tick	Tick value	Underlying / delivery
2-Year Treasury Note	ZT	$200,000 face value	1/4 of 1/32	$15.625	Eligible 2-year Treasury note basket; physical delivery
5-Year Treasury Note	ZF	$100,000 face value	1/4 of 1/32	$7.8125	Eligible 5-year Treasury note basket; physical delivery
10-Year Treasury Note	ZN / TY	$100,000 face value	1/2 of 1/32	$15.625	Eligible 10-year Treasury note basket; physical delivery
Ultra 10-Year Treasury Note	TN	$100,000 face value	1/2 of 1/32	$15.625	Longer-duration eligible note basket; physical delivery
US Treasury Bond	ZB	$100,000 face value	1/32	$31.25	Eligible long-term Treasury bond basket; physical delivery
Ultra US Treasury Bond	UB	$100,000 face value	1/32	$31.25	Longer-duration bond basket; physical delivery

Options on Treasury futures

CBOT lists options on each of the core Treasury futures families. One option contract gives exposure to one underlying Treasury futures contract. These are options on futures, not options on a cash Treasury bond: exercise or assignment results in a futures position, subject to the applicable contract rules.

Option family	Underlying future	Contract multiplier	Exercise / expiry convention	Premium and settlement
2-Year Treasury Note options	ZT	1 ZT future	American-style options on futures; listed serial and quarterly expiries vary by series	Quoted in Treasury price points; premium paid in dollars; exercise creates futures exposure
5-Year Treasury Note options	ZF	1 ZF future	American-style options on futures; listed serial and quarterly expiries vary by series	Quoted in Treasury price points; premium paid in dollars; exercise creates futures exposure
10-Year Treasury Note options	ZN / TY	1 ZN future	American-style options on futures; listed serial and quarterly expiries vary by series	Quoted in Treasury price points; premium paid in dollars; exercise creates futures exposure
Ultra 10-Year Treasury Note options	TN	1 TN future	American-style options on futures; listed serial and quarterly expiries vary by series	Quoted in Treasury price points; premium paid in dollars; exercise creates futures exposure
US Treasury Bond options	ZB	1 ZB future	American-style options on futures; listed serial and quarterly expiries vary by series	Quoted in Treasury price points; premium paid in dollars; exercise creates futures exposure
Ultra US Treasury Bond options	UB	1 UB future	American-style options on futures; listed serial and quarterly expiries vary by series	Quoted in Treasury price points; premium paid in dollars; exercise creates futures exposure

Trading and contract mechanics

Item	Practical detail
Trading venue	CME Globex central limit order book; block trades and RFQ liquidity are also available under CME rules.
Trading hours	Near 24-hour electronic trading with a daily maintenance window. Consult the current CME holiday and trading-hours calendar before scheduling orders.
Futures settlement	Daily mark-to-market. Deliverable futures converge through physical delivery of an eligible Treasury security, with invoice price determined by futures price, conversion factor and accrued interest.
Options settlement	Options are premium-style options on futures. Exercise and assignment result in the underlying futures contract; final dates and exercise cutoffs are contract-specific.
Contract months	Quarterly Treasury futures cycles are standard. Options also include serial and other listed expiries; the live contract calendar controls availability.
Risk note	Tick values, eligible baskets, delivery months, price limits, expiries and hours can change. Confirm the live CME contract specification and rulebook before trading or valuing a position.
